DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Masuyama in view of Takizawa in view of Goldstein (5,542,682).

Masuyama discloses an oil ring comprising an I-shape with two rails and a column. A coil expander 22 is in an inner peripheral groove and made of shape memory alloy. The expander expands at a higher temperature. Masuyama does not disclose the width of the ring. Takizawa teaches an oil ring with a coil expander. The ring has a width of 1.2 to 2mm which is within the claimed range. It would have been obvious to one of ordinary skill in the art at the time the invention was made to make the width in that range as such is a known dimension yielding expected results.

Masuyama discloses that the shape and size of the coil expander can be selected to provide the desired tension requirements and can be selected from known shapes, etc. (see col. 6, lines 37-49). However, Masuyama does not disclose specifically disclose that the spring has a rectangular cross-section with a thickness/width ratio as claimed. Goldstein teaches equivalent coil spring cross-sections including a rectangular shape (see Fig. 6, 50d). Goldstein does not appear to disclose the claimed ratio though. It is not considered inventive to discover the optimum or workable ranges by routine experimentation absent some showing of criticality. See

Art Unit: 3676

In re Aller, 105 USPQ 233, 235 (CCPA 1955). Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use a spring with a rectangular shape and a ratio in the claimed range as such shape is a known equivalent and Masuyama has indicated that one of skill can modify the shape to achieve a desired tension.

Response to Arguments

3. Applicant's arguments filed 6-20-08 have been fully considered but they are not persuasive.

The combination of Masuyama and Takizawa teaches an oil ring with the claimed width and a shape memory alloy expander. Both Goldstein and Balsells teach that coil springs can be made with a rectangular cross-section and achieve an expected result. And, Masuyama specifically states that the shape and size of the coil expander can be selected to achieve a desired tension, which appears to be the same issue Applicants were trying to solve. Thus, it seems obvious that this range would have been discovered through routine experimentation given Masuyama's suggestion to adjust the size and shape of a coil expander to control tension.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alison K. Pickard whose telephone number is 571-272-7062. The examiner can normally be reached on M-F (9-5).
